cdata

Power real business insights with data replication from any source

Getting people in your organization the data they need can be a thankless task. You need simplified data pipelines that connect any of your sources and destinations – cloud, on-prem, or hybrid – without worrying about build time or ongoing maintenance.

ETL/ELT pipelines delivered in minutes

CData Sync simplifies the building and maintenance of data pipelines, allowing you to quickly deliver data at scale, without the technical complexities of Databricks Auto Loader. Sync's no-code interface saves data teams time and provides the ability to customize pipelines with an API Connector that can preconfigure connections. Log-based Change Data Capture replication is near-real time, allowing automated, continuous replication down to one-minute increments.

Enterprise-grade connections

Build your data pipelines with the same drivers Google and Salesforce rely on to power data connections for their customers.

- **Unmatched speed**: Performance up to twice as fast as native or other third-party drivers
- **All your applications**: Connect with 300+ cloud and on-prem applications from across your tech stack
- **Secure and compliant**: Sync is fully encrypted — never reading or storing your data — and is SoC2, HIPAA, and GDPR compliant

All-in-one ETL without the hassle

Automate your data movement with scheduling flexibility down to the minute.

- **ELT**: Call advanced dbt Core and dbt Cloud transformations
- **ETL**: Utilize SQL within Sync for custom transformation capabilities
- **Reverse ETL**: Analysts and business users can see Databricks data right in Salesforce

Don't pay for every row

Get clear, predictable pricing based on connections, not rows of data. This ensures you can replicate all the data you need without unexpected overages or blocked pipelines.

- **Predictable**: No need to track replication volumes or manage monthly credits. You pay for your annual license – that's it.
- **Scalable**: As your organization grows your replication solution keeps pace with any increase in pipeline volume.

"We've built an entire end-to-end solution where we use CData to bring in Salesforce and NetSuite data information, piece it together inside Databricks, and then tease out all the drivers of our business. What used to take us 15 days for two people we can do in 6 minutes."

— Siddarth Ranganathan
Nintex Senior Director of Data Science, BI & Analytics

CData Software – The leading provider of data access & connectivity solutions

CData Software is a leading provider of data access and connectivity solutions. Our self-service data products and connectivity solutions provide universal access to live data from hundreds of popular on-premises and cloud applications. Millions of users worldwide, including Salesforce, Office Depot, and Holiday Inn, rely on CData to enable advanced analytics, boost cloud adoption, and create a more connected business. Consumable by any user, accessible within any application, and built for all enterprises, CData is redefining data-driven business.
