

Is your AI agent a Mr. Magoo?

Most agents don't fail because they're dumb...
they fail because they're blind

The problem:

Inaccessible third-party data
leads to flawed agent output

950+

apps in average enterprise¹

68%

of data available is untapped²

Without access to the data squirreled away in your customers' apps, your AI agents operate like Mr. Magoo without his glasses. They...

Miss critical context

Make incorrect
assertions

Can't take meaningful
automated action

Expensive agents became little more than glorified chatbots,
missing out on AI's transformative power.

The fix: Give your agents glasses

To see and take the right next steps, your agent needs...

Structured, analysis-ready
customer data

Live, real-time
data access

A unified view across
all systems

CData's **MCP-enabled Embedded Connectors** are the "glasses" your agent needs to transform from a bumbling Magoo into a business weapon.
