

Industry-leading connectivity with analytics and reporting platforms, ETL tools, and custom apps

Real-time Data Connectors

Organizations need frictionless access to data – on their schedule, for their unique use cases, and accessible across a growing batch of tools. With CData Drivers, IT can provide departments, teams, and individuals with self-service, continuous data access from all their favorite platforms and tools. Standards-based drivers create a universal bridge to your data and the insights it holds.

Standards-Based, Universal Connectivity

CData offers a straightforward approach to integration, with easy-to-use data providers, drivers, and tools available from any technology capable of interacting with major database standards, such as ODBC, JDBC, ADO.NET, OData, SSIS, Excel, etc.

With CData Drivers, your business sees the benefit of real-time data access while cutting down on the cost, complexity, and maintenance of building custom integrations.

Eliminate Architectural Complexity

CData Drivers provide a standard interface no matter the tech stack or file format, for full metadata discovery, embedded caching, and replication commands to make it easy to copy data to local and cloud data stores, seamless Linked Servers access and remote connectivity for MySQL and TDS, and high-performance pushdown, batch and bulk operations.

Real-Time Access to Data – Easily connect to over 260 data sources including Big Data & NoSQL, accounting, CRM, ERP, collaboration, and e-commerce platforms, relational database management systems (RDBMS), APIs for custom applications, and an array of file formats.

Standardize on SQL – CData Drivers speak the language you know and love, SQL, regardless of the data structure or type.

Rich Metadata Discovery – Full support for Metadata provides extensive schema discovery capabilities. Explore tables, columns, keys, etc. based on user identity.

Robust SQL-92 Support – Built on a rich SQL-92 engine with support for bulk operations, push-down, client functions, and aggregation, our drivers seamlessly handle even the most complex queries from modern BI and reporting platforms.

High-Performance Data Connectivity – With optimized performance down to the socket level, our drivers offer unmatched performance. Read and write speeds over twice as fast as other SaaS, NoSQL & Big Data connectivity solutions.
